

# 0907 - 회원 웹 기능 - 조회

## MemberController

```
@GetMapping("/members")
public String list(Model model) {
    List<Member> members = memberService.findMembers();
    model.addAttribute("members", members);

    return "members/memberList";
}
```

## memberList.html

```
<!doctype html>
<html xmlns:th="http://www.thymeleaf.org">
<body>

<div class="container">
    <table>
        <thead>
            <tr>
                <th>#</th>
                <th>이름</th>
            </tr>
        </thead>
        <tbody>
            <tr th:each="member : ${members}">
                <td th:text="${member.id}"></td>
                <td th:text="${member.name}"></td>
            </tr>
        </tbody>
    </table>
</div>
```

```
</body>
</html>
```
